

Unread

Unread is a book tracking app created for the CodeClan Javascript group project in week 9 of the professional software development course. It allows multiple users to track the books they have read and wish to read, using the OpenLibrary API.

MVP

A user should be able to:

- Search books from an API, find a specific one and add it to the database
- View, edit and delete it.
- Mark the book as read, or still to read.

Extensions

- Allow for multiple users
- Suggest a book - randomly generated from the app
- Using a graph to see your progress over the year. A visual of your books per year.

Advanced Extensions

- Share a book externally - send a book to another user in the app
- Share a book externally - send a book by email
